

云之彼端

Docker In Clouds

Agenda

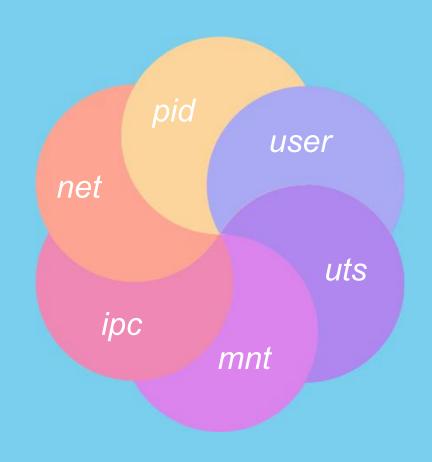

- Isolate -> Namespaces
- Control Groups -> cgroups
- LXC -> Linux Container
- Why named Docker
- Docker is the next generation PaaS

Isolate

Namespaces

- pid namespace
- net namespace
- *mnt* namespace
- *ipc* namespace
- uts namespace

Resource Control

Control Groups - cgroups

- Memory
- CPU Share
- CPU Set
- Block I/O

CPU: 0,1 memory: 1G

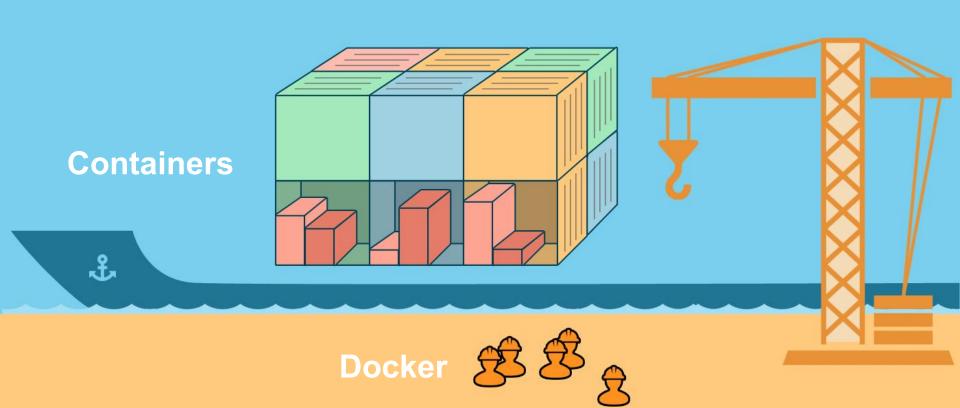

CPU: 2, 3, 4 memory: 3G

CPU: 5, 6, 7 memory: 512M

LXC - Linux Container

Provide powerful api and simple tools to manage resource through the namespaces and control groups aka cgroups.

Why named Docker?

Build A Golang Docker

```
26
     docker-version
                           0.6.1
27
     FROM
                 ubuntu:12.04
28
     MAINTAINER
                       Solomon Hykes <solomon@dotcloud.com>
29
30
     # Prevent apt-get install from trying to prompt for stuff
31
                DEBIAN FRONTEND noninteractive
     ENV
32
33
     # Build dependencies
34
                echo 'deb http://archive.ubuntu.com/ubuntu precise main universe' > /etc/apt/sources.list
     RUN
35
     RUN
                apt-get update
36
                apt-get install -y -q apt-utils
     RUN
37
                apt-get install -y -g curl
     RUN
38
                apt-get install -y -g git
     RUN
39
     RUN
                apt-get install -y -g mercurial
40
                apt-get install -v -g build-essential libsglite3-dev
     RUN
41
42
     # Install Go
43
                curl -s https://go.googlecode.com/files/gol.2.src.tar.gz | tar -v -C /usr/local -xz
     RUN
44
     ENV
                PATH
                            /usr/local/go/bin:/usr/local/bin:/usr/local/sbin:/usr/bin:/usr/sbin:/sbin
45
     ENV
                COPATH
                              /go:/go/src/github.com/dotcloud/docker/vendor
46
                cd /usr/local/go/src && ./make.bash --no-clean 2>&1
     RUN
47
     # Cross compilation
48
49
                                              darwin/amd64 darwin/386
     ENV
                DOCKER CROSSPLATFORMS
50
     # TODO add linux/386 and linux/arm
51
     RUN
                cd /usr/local/go/src && bash -xc 'for platform in $DOCKER CROSSPLATFORMS; do GOOS=${platform*/*} GOARCH=${platform
52
```

Docker is the next generation PaaS
